CONTENTS

CLASSICAL ARPPROACH

DEEP LEARNING ARPPROACH

UNSUPERVISED SEGMENTATION

1

CLASSICAL APPROACH

PREPROCESSING

- IMAGES RESIZING
- CONTRAST ENHANCEMENT

FEATURES EXTRACTION

1. Modified Normalized Difference Water Index (MNDWI)
2. Gray-Level Co-occurrence Matrix (GLCM)
3. Color Histogram
4. Local Binary Pattern (LBP)

MODEL TRAINING

Model	Parameters
Random Forest	n_estimators=80, max_depth=8, random_state=42
AdaBoost	n_estimators=100 ,learning_rate=0.2 , random_state=42
Naive Bayes	Default
XGBoost	max_depth=15 , n_estimators=150 , learning_rate=0.2, random_state=42

MODEL EVALUATION

1. RANDOM FOREST
ACCURACY: 91.37%
F1-SCORE: 0.91331

MODEL EVALUATION

2. ADABOOST:
ACCURACY: 84.2%
F1-SCORE: 0.842

MODEL EVALUATION

3. NAIVE BAYES:
ACCURACY: 81.3%
F1-SCORE: 0.8122

MODEL EVALUATION

4. XGBOOST:
ACCURACY: 90.56%
F1-SCORE: 0.9063

2

DEEP LEARNING APPROACH

PREPROCESSING

- Resize images
- Zero-Centering
- Data Augmentation

FEATURES EXTRACTION

- Images are features flattened to a vector of size $W \times H \times 3$.

MODEL EVALUATION

CNN:

Accuracy: 83%

F1-score: 0.82

0=flood , 1 = non-flood

MODEL EVALUATION

ResNet:

Accuracy: 98%

F1-score: 0.98

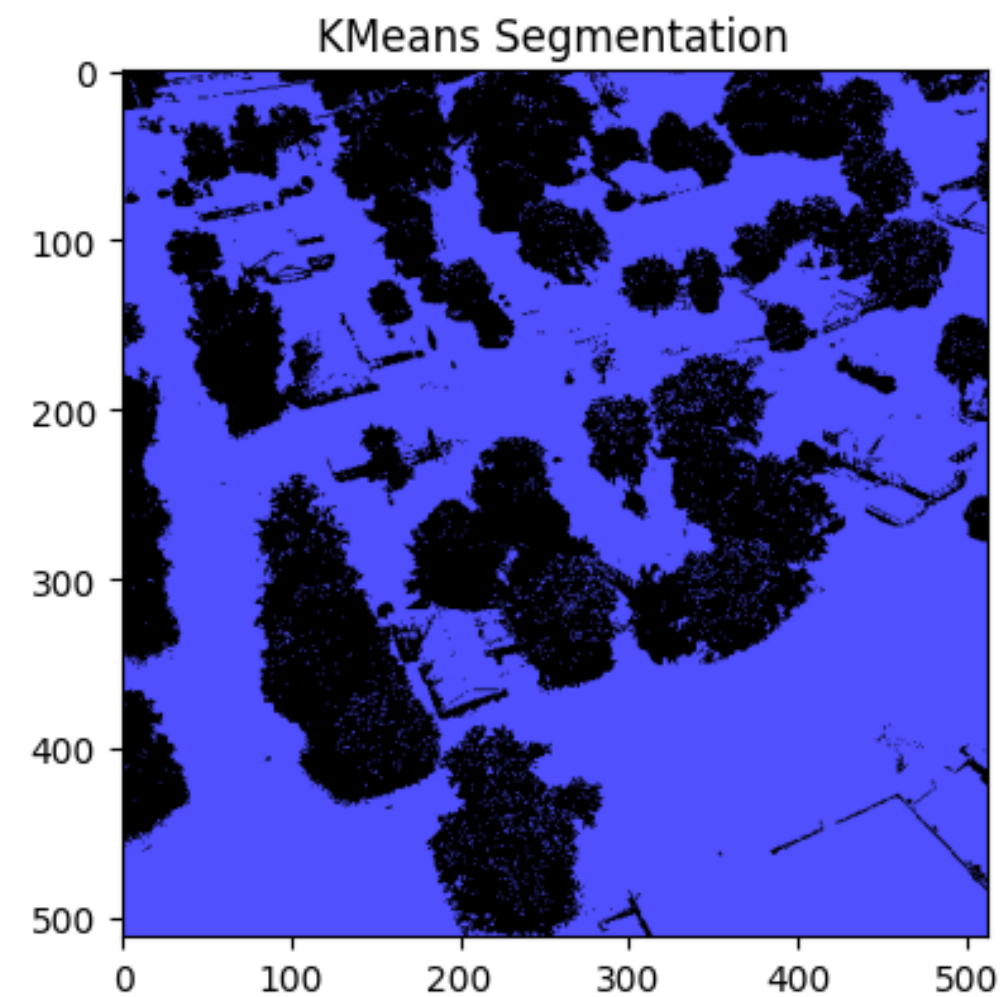

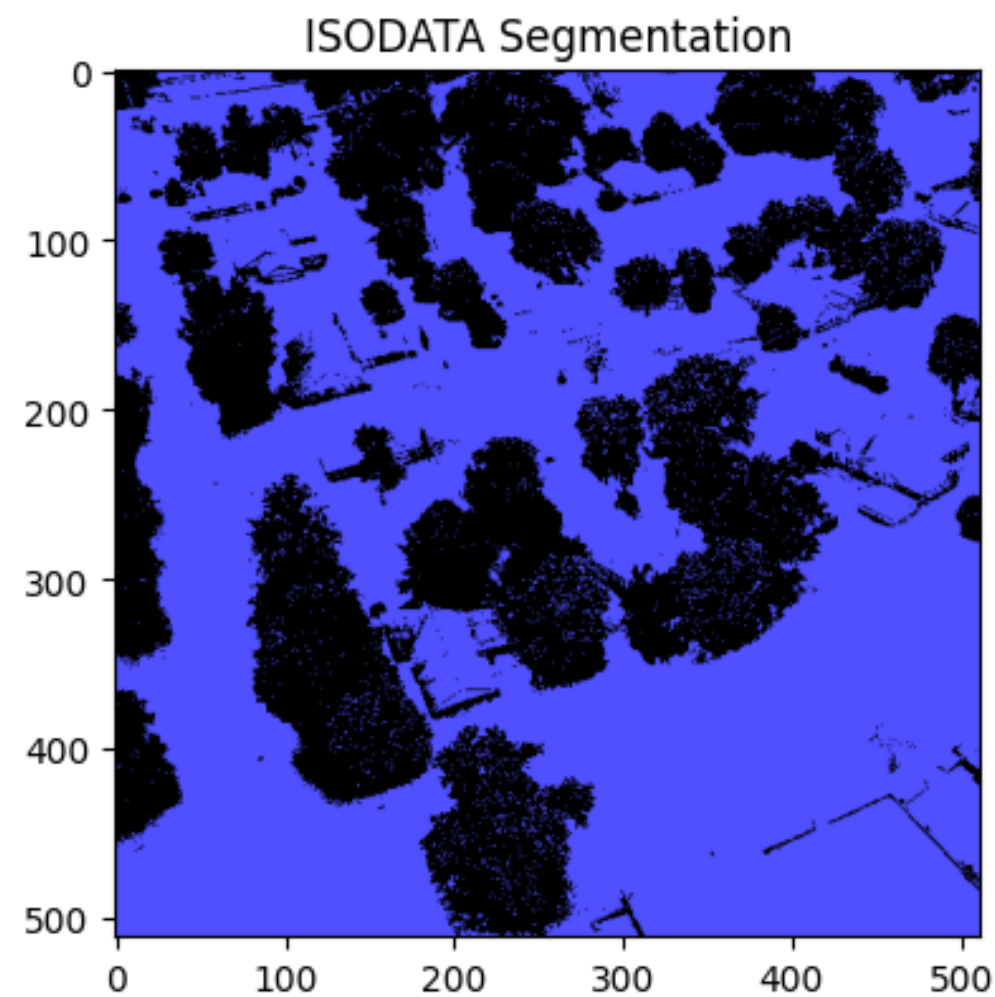

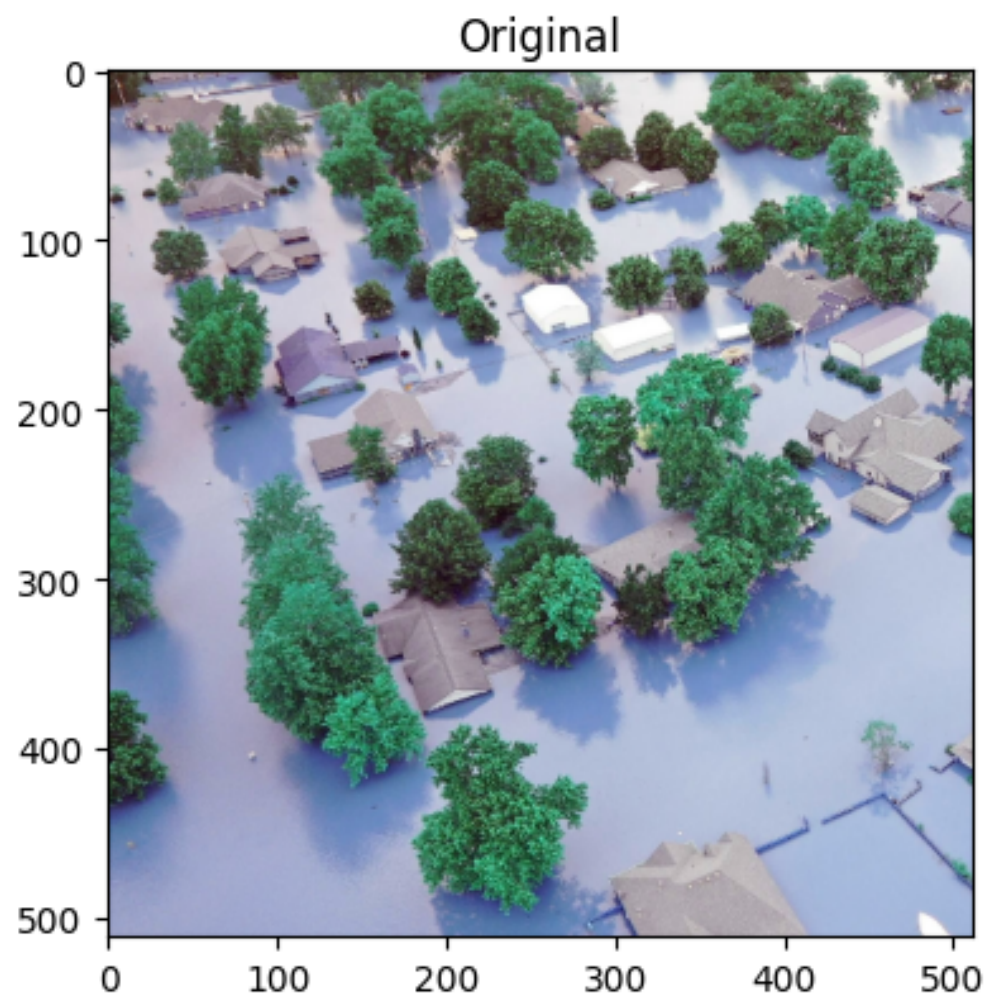

0=flood , 1 = non-flood

3

SEGMENTATION

SEGMENTATION

- ISODATA
- KMEANS

THANK YOU
